¹never used RP's book

²Method error vs roundoff error how to find analytically - i don't know

³not very good at intuitively figuring out if system is behaving how it is supposed to

⁴didn't do analytical part or best θ

⁵bug in my linearisation and finding jacobian - I didn't perturb the fixed point

⁶some bug with the 2 spring mass system, i didn't get periodic motions with my rootfinding

⁷i got lazy

⁸pseudo-periodic is hard to identify and neutrally periodic is little confusing

⁹my ratio of error when you double h was not 4

¹⁰Controllable Region Estimation and feasibility recovery not done well

¹¹not very intuitive with how it handles disturbances

¹²I understand the methodology but not the system model
